Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1-3 and 5-15 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-3, 5, 7, 8, and 12-15 are rejected under 35 U.S.C. 102(b) as being anticipated by Kase 5749368.
4. Kase teaches a device for detecting the flow of gas through at least one opening in an object, the device comprising: an inlet; a chamber having an interior; an outlet open to ambient pressure and configured so as to restrict flow to a greater degree than the inlet; wherein the visual indicator comprises a movable element on a graduated scale; wherein the movable element is tensionably connected to the pressure displaceable member, such as to have a normal position at zero (col. 4, lines 40-43); a pressure displaceable member having an inner face and an outer face; wherein the inlet is associatable with the opening by an attaching member; wherein the chamber is in fluid communication with an outlet configured so as to restrict flow; wherein the pressure displaceable member is protected by a casing removably attached to the device.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kase.

7. Kase teaches the device of claim 1. Kase fails to specifically teach wherein the pressure displaceable member is removably coupled to a visual indicator of displacement of the pressure displaceable member. However it would have been obvious to one of ordinary skill in the art to make the pressure displaceable member removable for maintenance such as cleaning or repair.

8. Claims 9-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kase in view of Aylsworth et al. 5911219.

9. Kase teaches the device of claim 1. Kase fails to teach where the pressure displaceable member is operatively associated with a sensor.

10. Aylsworth et al. teaches a device with a common sensor for communicating with the user or care giver (col. 2, lines 36-37). Therefore it would have been obvious to one of ordinary skill in the art to modify the device of Kase to include the sensor of Aylsworth et al. to measure flow and store data associated with the sensor (col. 3, lines 18-33).

11. Kase/Aylsworth teaches the device of claim 9, wherein the indication is any one of a group comprising visible, audible and tactile indications (col. 7, lines 11-13); and wherein the indication is transmittable to a remote receptor (col. 7, lines 38-44).

12. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within

Art Unit: 3761

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
